

NEWS ALERT

Cortec[®] CorroLogic[™] System for Cased Pipeline Crossings Featured in December Issue of Materials Performance Magazine!

Protection for cased pipelines

Cortec Corp. (St. Paul, Minnesota) has released the CorroLogic[™] system for cased pipeline crossings. The system uses a vapor-phase corrosion inhibitor (VpCI[®]) to protect the annular space between a carrier pipe and casing. It consists of a liquid VpCI[®] concentrate and a powder gelling agent that when applied quickly sets into a corrosion controlling gel. Options for corrosion rate monitoring are also available. CorroLogic[™] is part of a new family of systems, services, and products especially designed to control

corrosion in a variety of applications within the most aggressive corrosive environments. Phone: +1 651-429-1100, Web site: www.cortecvci.com.
