## Cortec's EcoLine® 3220 and 3690 Featured in January - February Issue of Machinery Lubrication Magazine!

### BIODEGRADABLE COATINGS.....

Cortec's EcoLine 3220 and 3690 are bio-based, biodegradable coatings developed to replace oil-based rust preventatives. EcoLine 3220 is a canola-oil-based coating that provides a temporary film that clings to metal surfaces, while EcoLine 3690 contains canola oil as a carrier and offers open-air corrosion protection. Both products are designed for extended temporary protection of multi-metals and can be easily removed using a bio-based surface cleaner/degreaser. As a green replacement for mineral oils, they provide corrosion protection while being environmentally safe and non-hazardous.
