## Cortec® MCI® -2018 V/O Featured in November Issue of Concrete International.

### MCI-2018 V/O

Cortec's MCI®-2018 V/O is a higher viscosity version of the MCI-2018 sealer for vertical and overhead applications. This line of water repellants is 100% active silane, and works by chemically reacting with concrete surfaces to form a strong bond with the substrate. It creates a hydrophobic layer that repels water and keeps chlorides out without affecting the moisture vapor transmission of the concrete. The Migratory Corrosion Inhibiting (MCI) molecules penetrate the pores to adsorb on underlying metal reinforcement and protect from corrosion. It can be applied by spray, brush, or roller, and dries without affecting the appearance of the surface.
