

# NEWS ALERT

## Cortec® VpCI®-380 Featured in November/ December Issue of Concrete Repair Bulletin.

### **CORTEC® VPCI®-380: WEATHERPROOFING FOR THE LONG HAUL!**

Cortec's new VpCI-380 is a fluoro-polymer-modified water-based acrylic designed specifically for the railway industry. Using a complex mixture of nontoxic, organic inhibitors, the VpCI-380 can replace most primer and topcoat systems with corrosion protection in just one coat. The VpCI-380 is a flexible solution to use alone or in conjunction with the Cortec VpCI-395 primer, applied by spray, flow coat, brush, or dip.

The VpCI-380 Railcar Coating adheres to a wide variety of substrates, including ferrous and nonferrous metals and many engineered plastics; its hardness and moisture resistance make it an ideal air-dry/force-dry industrial coating. The VpCI-380 offers a nonflammable, UV-resistant barrier from the elements with a fast-drying/high-gloss finish. It also exhibits excellent outdoor performance, resisting chipping or cracking in prolonged exposure to sunlight.
