

# NEWS ALERT

Cortec® EcoLine® 3220 & EcoLine® 3690 Featured In January Issue of CoatingsTech Magazine.

## Biobased Coatings

Cortec has developed two new biobased and biodegradable coatings. EcoLine® 3220, a canola oil-based, ready-to-use temporary coating, offers a film which clings to metal surfaces, providing contact corrosion protection in storage and shipment. EcoLine® 3690 is a self-healing and moisture-displacing coating which is intended for applications in aggressive environments such as marine and high humidity conditions.
