### **Cortec:** Bio-Based Corrosion Protection at Lower Cost

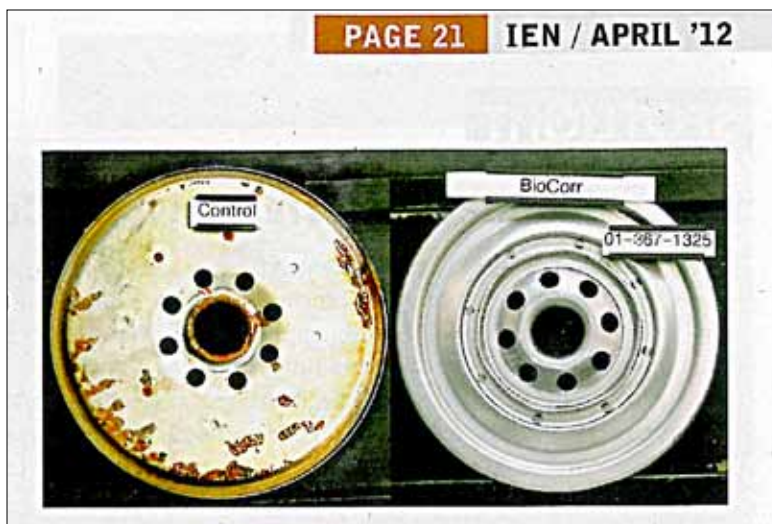

BioCorr rust preventative is a 100% bio-based, water-based and biodegradable product, formulated with renewable raw materials. It is intended for preservation of metals during processing, in storage and transportation.

The product, now also available in totes, offers a wider range of packaging choices. It offers a multi-metal protection, and is an environmentally sound alternative to petroleum derived products.

Metal surfaces protected with BioCorr do not require cleaning and, in most cases, can be painted over, eliminating expensive disposal costs associated with oils.

It can be used as preservative for machines and equipment and protection of pipes, flanges, gears, galvanized steel, cooper, cast iron and coils. BioCorr leaves a dry film on the surface of the metal that is virtually invisible, preventing material waste and allowing for a clean workplace. **Cortec Corp.:** 800-426-7832
