## Cortec® S-7 Liquid Featured in February Issue of Industrial Equipment News.

### **Cortec:** Additive Allows for Rapid Oxygen Removal

S-7 Liquid is a new anti-corrosion additive from Cortec Corp. The additive is a bisulfate-based oxygen scavenger designed

to rapidly remove oxygen from water used for hydro-testing or boiler water. Although originally designed for low to medium pressure boiler systems, S-7 Liquid can also be used in softening treatments and reverse osmosis systems.

The liquid is compatible with other Cortec additives and corrosion inhibitors for boilers. S-7 Liquid is a safe and economical way to prevent oxygen induced corrosion that can lead to pitting on metal surfaces, which in turn can cause rapid and costly system failure. **Cortec**
