Cortec: Corrosion Preventative Keeps Protection Costs Down

VpCI-377 is water-based concentrate designed as a complete replacement for oil-based preventives for indoor protection of equipment and components. The corrosion preventative liquid meets tough antipollution requirements. Its wide dilution range with water allows flexibility to customize the length of protection required and the applied cost per sq meter.

As oil prices increase, anti-corrosion oil prices may follow suit. Meanwhile, as the cost of Brent Crude increased by 370.35%, the cost of VpCI decreased by 13.36%. Using VpCI-377 provides an alternative that is 43 times lower in cost than classic mineral oils and eliminates expensive disposal costs associated with oils.

This concentrate forms clear, dry, hydrophobic film which renders an attractive appearance to protected parts. It protects ferrous and non ferrous metals, vapor phase action protects uncoated surfaces and difficult to reach areas. It is water soluble, non-flammable and easy to remove if necessary, very stable in hard water, nitrite- and phosphate ester-free. **Cortec Corp.:** 800-426-7832; 651-429-1100
