### PRESS RELEASE

## Micro-Corrosion Inhibiting Coating!

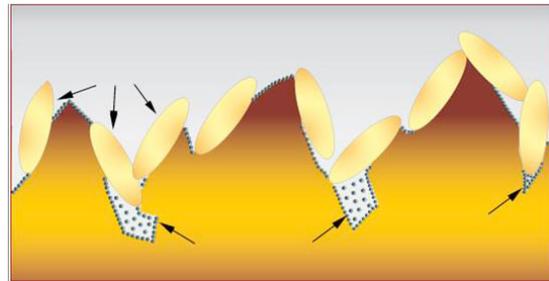

Cortec's VpCI®-395 is an economical, water-based epoxy primer with excellent adhesion that provides salt spray, immersion, and long term corrosion protection to steel. This non-hazardous, non-flammable coating differs from other epoxy primers by minimizing long-term embrittlement and has a fast drying time (20-30 minutes dry to touch) as well as excellent corrosion resistance. Its water-based formulation makes it easier to comply with environmental regulations governing solvents and VOC limits. Clean up is easy using soap and water.

Micro corrosion inhibiting primer VpCI®-395 replaces zinc rich primers and provides long-term corrosion resistance in a corrosive atmosphere.

VpCI®-395 works in HCl, H<sub>2</sub>S, SO<sub>2</sub>, and CO<sub>2</sub> vapor environments and can be top coated with Cortec's VpCI®-386 water-based coating and other conventional coatings. Typical uses include; structural steel, OEM primer, equipment overhauls, immersed equipment, and holding tanks; protects carbon and stainless steel, cast iron, galvanized steel, and aluminum. The product conforms to NACE Standard 0487-2000 and is UL Classified in accordance with standard NSF 61 for potable water.

Traditional coatings do not reach micro-cavities

Cortec® VpCI® coating protects micro-cavities
