## Cortec's EcoWorks® Film and Bags Featured in June Issue of BioCycle Magazine.

### COMPOSTABLE FILM

Cortec's line of Eco Works certified biodegradable and compostable flexible films and bags is designed to replace many forms of low- and high-density

polyethylene at a competitive pricepoint. Applications range from protective industrial and agricultural films to retail packaging and municipal waste diversion collection bags. Eco

Works' formulations can be customized to meet precise needs. When placed in a typical composting environment, the film will fully biodegrade into carbon dioxide and water within six to eight weeks, according to Cortec. The films have been certified 100 percent biodegradable/compostable per ASTM D6400 and DIN EN 13432 by certifying agencies such as BPI and DIN CERTCO.
