New corrosion control products line unveiled as eco-efficient

BioCortec products are introduced as this company's "green response to oil derived corrosion control products."

The eco-efficient products are made from sustainable, compostable, and biodegradable materials. They are emphasized to "have positive effects on the environment and are completely safe for the people who work with them."

The BioCortec line includes **films and bags** to replace LDPE, LLDPE, and HDPE films as well as **VpCI papers** with multi-metal corrosion control — using highest quality neutral/natural Kraft paper.

EcoEmitter delivers corrosion protection for electronic and optical equipment and components. **EcoAir** air-powered aerosols are replacements for traditional chemical propellants. **EcoLine** canola and soya-based VpCI technology is also offered along with **foam devices** made from soy vegetable oils and bio-based fibers for corrosion protection — emitting VpCI molecules that absorb onto metal surfaces. **Migratory Corrosion Inhibitors** are additives for concrete used to prevent rebar corrosion. Complete BioCortec specifics are yours free.
