

NEWS ALERT

Cortec® EcoOcean™ Featured in October Issue of Packaging Digest.

Marine-biodegradable films/bags

New EcoOcean bioplastic combines environmental and performance benefits of flexibility and strength. The material is anaerobic and marine biodegradable (to help combat waterway litter), and commercial and low-temperature

backyard compostable. It also contains 77 percent annually renewable raw material content. EcoOcean has been tested to numerous standards and specifications, including ASTM D 7081: Standard Specification for Biodegradability in Marine Environments; ASTM D 5511: Standard Test Method for Anaerobic Biodegradation (15 Days); and ASTM D 6400: Standard Specification for Commercial Compostability.
