## Cortec® Compostable/Biodegradable Films Become Commercially Certified.

Cortec® is proud to announce that Eco-Corr®, Eco-Corr® ESD, and Eco Wrap® are now certified compostable per ASTM D6400 the standard specification for commercially compostable plastics and can carry the BPI/USCC approval mark. This specification establishes the requirements for packaging that will safely and quickly convert to CO<sub>2</sub> and H<sub>2</sub>O in municipal and industrial composting facilities.

- Eco-Corr® is a certified 100% biodegradable and compostable film utilizing Cortec's patented VpCI™ technology.
- Eco-Corr® ESD has been formulated to meet military standards MIL-PRF-81705D and protects electronics from corrosion and static damage.
- Eco Wrap® is a stretch film used for masking applications and palletizing including vigorous international shipments. Eco Wrap® uses controlled adhesion to stick firmly and leaves no residue upon removal.

These are the first corrosion inhibiting, static dissipative, and stretch films approved by the BPI. This certification proves Cortec® is committed to continued development of products that are not damaging to the environment.
