## Introducing Bionetix DEL 2002: An Organic Salt That Performs Like an Acid.

In the past, facilities have turned to acids when they needed to remove difficult scale, rust, and calcium build-up from hard surfaces. Now, Bionetix DEL 2002 presents a cost-effective and organic alternative to traditional acids.

DEL 2002 can replace multiple acid blends, offering both cost and performance advantages over phosphoric and citric acid as well as many other acids. Because it has no solubility limit, DEL 2002 is a perfect fit as a concentrated cleaner for use in many applications. Comprised of biological cultures and a blend of surfactants, it is strong enough to clean cement mixers and other paving equipment while still being safe for pH adjustment in pools and spas after dilution. Unlike other acid cleaners, DEL 2002 is non-fuming and non-corrosive.

Comprised of biological cultures and a blend of surfactants, it is strong enough to clean cement mixers and other paving equipment.

Whether cleaning the grout and tile in a spa or removing grime from a locomotive, DEL 2002 is the ideal organic replacement for traditional acid cleaners.
