PRODUCT NEWS RELEASE

EcoLine® 3690: Biobased, Self-healing, Temporary Coating.

Cortec® Corporation, the leading manufacturer of material solutions has recently developed a biodegradable, ready-to-use, self-healing, moisture-displacing, temporary protective coating for corrosion control of metal surfaces. Derived from canola oil, EcoLine® 3690 is 80% biobased, making it a non-hazardous, non-toxic coating which lowers its environmental impact and preserves our environment and natural resources. This high-performance coating is designed to provide durable, trouble free performance in any climate and under any weather condition. It can be applied at low temperatures (EcoLine® 3690's freezing point is -18°C).

Applying a thin film of EcoLine® 3690, with Cortec's Vapor phase Corrosion Inhibitor (VpCI™), will improve the surface properties, corrosion resistance, and scratch resistance of your substrate. It may be applied without altering or affecting overall physical properties while improving durability and anti-corrosion measures for your vulnerable metals. EcoLine® 3690 can be applied by brush, roll, dip, or spray for the protection of metal surfaces such as steel, cast iron, copper, or aluminum. Typical applications include structural steel, cable, outdoor equipment, pumps, piping, etc. Tests showed a 1 Mil coat of EcoLine® 3690 protects steel for over 2,000 hours in 98% humidity.

By applying a timely application of EcoLine® 3690 you will achieve a quality, durable coating that prevents decay and conserves resources.

This ASTM B-117 salt spray test shows that a coating of EcoLine® 3690 protects metals for 300 hours in 100% humidity with no rust. Further tests have shown the same results with over 2,000 hours logged.
