**PRODUCT RELEASE**

## **Cortec® M-531 Provides Protection Like No Other!**

Cortec's M-531 is a synergistic blend of additives formulated as a multifunctional rust and corrosion inhibitor for use in a variety of petroleum and synthetic lubricants. This oil-based package of corrosion inhibitors provides outstanding demulsibility and filterability with excellent non-staining properties. M-531 is very effective for naphthenic, iso-paraffinic, PAO, and other similarly based lubricants. It provides a barrier between metal surfaces and harmful elements by forming a protective film that chemically bonds to metal surfaces to inhibit corrosion and rust, critical to any performance package's effectiveness.

M-531 is highly recommended for use in hydraulic fluids; and is also ideally suited for formulating paper machine oils and circulating oils where good filterability, anticorrosion, thermal stability, and demulsification properties are required. When added at recommended concentration to hydraulic fluids, it does not affect emulsification, pour point, or viscosity at low temperatures. This additive, suitable for both operating and intermittent use conditions, has significant uses for engine oils, gear oils, metalworking fluids, and greases.

Cortec® Corporation is a world leader in innovative, environmentally responsible VpCI® and MCI® corrosion control technologies for Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas, and other industries. Our relentless dedication to sustainability, quality, service, and support is unmatched in the industry. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
