PRODUCT RELEASE

Cortec® MCI® POWR: Extends the Life of Reinforced Concrete Structures.

MCI® POWR is a water-based, penetrating alkylalkoxy silane containing Cortec's Migrating Corrosion Inhibitor (MCI®) technology. MCI® POWR is specifically designed to protect new and existing concrete structures against the damaging effects of moisture intrusion, freeze/thaw scaling, chloride-ion (salt) intrusion, as well as oil and water staining.

The small molecule size of MCI® POWR allows deep penetration into concrete and provides repellency by chemically reacting with the cementitious substrate when properly applied. Treated substrates are hydrophobic and retain their original appearance, allowing the concrete to breathe. Once applied, MCI® POWR not only provides water repellency, but also protects concrete from oil and water staining. Added MCI® technology allows this product to penetrate to embedded reinforcement where it forms a protective, monomolecular, corrosion-inhibiting layer.

MCI® POWR is easily applied by spray, brush, roller, or squeegee and is oil and water-resistant within 24 hours. It is non-toxic, contains no nitrites, phosphates, or chromates. It is recommended for application to bridges, highways, parking decks, concrete floors, and other concrete structures exposed to oils, grease, and water.

Cortec® Corporation is a world leader in innovative, environmentally responsible VpCI® and MCI® corrosion control technologies for Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas, and other industries. Our relentless dedication to sustainability, quality, service, and support is unmatched in the industry. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
