**PRODUCT RELEASE**

## **Cortec's state-of-the-art VpCI®-126 HP UV Shrink film provides unstoppable multi-metal protection.**

Cortec® VpCI®-126 HP UV Shrink Film combines high strength resins with ultraviolet light stabilizers (UV) and Vapor phase Corrosion Inhibitor (VpCI®) technology. This state-of-the-art film provides multi-metal protection for parts and equipment for up to three years even in aggressive outdoor conditions. Unlike some preservation films that rely on white pigments to reflect UV light, VpCI®-126 HP UV is transparent; containing unique inhibitors that protects the polymer from UV exposure and prevents degradation.

VpCI®-126 HP UV is ideally suited for transit, staging, and lay-up of critical equipment; including equipment with large void spaces, multiple metals, and complex geometries. It can replace conventional rust preventatives such as oils and desiccants, making equipment ready to use with no additional cleaning and/or degreasing necessary, saving you time and money. VpCI®-126 HP UV Shrink Film, in conjunction with other Cortec® products, provides a total turnkey preservation for long-term storage.

Metal parts packaged in VpCI®-126 HP UV Shrink Film receive continuous protection against salt air and humid environments, moisture, aggressive industrial atmospheres, and dissimilar metal corrosion. The VpCIs vaporize and condense on all metal surfaces within the enclosed space; and diffuse to every area of your part, protecting its exterior, as well as void spaces and recessed areas.

Features:

- Multi-metal corrosion inhibition providing contact, barrier, and vapor phase protection.
- Will shrink using a wide variety of shrink tools including electric and propane heat guns
- Recyclable and non-toxic
