

# PRODUCT SPOTLIGHT

## Cortec<sup>®</sup> Corporation's Boiler Lizard<sup>®</sup> for Easy Boiler Lay-Up.

Cortec's Boiler Lizard<sup>®</sup>, a Vapor phase Corrosion Inhibitor (VpCI<sup>®</sup>) powder in a polyvinyl alcohol (PVA) water-soluble bag designed for the dry lay-up of boilers. When placed within the boiler, VpCIs vaporize and adsorb to metal surfaces, reaching all recessed areas and interior cavities to protect the boiler for up to 12 months.

Boiler Lizard<sup>®</sup> eliminates the need for other forms of protection including nitrogen blankets, silica gel, and hydrazine; reducing chemical consumption and costs. It requires no surface preparation for routine shutdown maintenance, and does not need to be removed prior to equipment start-up.

### Advantages:

- Safe for handling
- Biodegradable, non-toxic, and non-irritating PVA bags
- Increases worker productivity and safety
- Protects up to 1,000 gallon system per bag (5 yd<sup>3</sup> or 3.8 m<sup>3</sup>)
- Reduces chemical consumption and costs
- Free of phosphates, nitrites, and amines
- Free of chlorides and silica; will not impact steam purity

Please contact Cortec<sup>®</sup> for more information on Boiler Lizard<sup>®</sup> or any of our other corrosion combatting technologies.
