Reduce Costs and Protect Your Equipment with Cortec's MCI® Creteskin®.

Before

After

MCI® Creteskin® is an industrial strength release agent containing Cortec's Migratory Corrosion Inhibitors (MCI®). It's designed to protect equipment, vehicles, and forms in the construction industry. This clear protective coating inhibits the adhesion of concrete, other cementitious materials, salts, and abrasives to painted and unpainted metal surfaces. It also provides corrosion protection to the underlying substrate, enabling continued use and a longer lifespan.

Once cured, MCI® Creteskin® provides an extremely durable and resistant surface that will stand up to high pressure and/or hot water washes typically used when cleaning concrete trucks and mixers. The coating allows easy cleaning with water pressure as an alternative to using abrasive blasting or acids. Using MCI® Creteskin® will further reduce costs and water consumption by eliminating the constant need for cleaning your equipment.

Typical application uses for MCI® Creteskin™ include ready mix and salt/sand truck chassis, drum mixers, batching plants, construction equipment, concrete forms and molds, and travel towers.

Please contact Cortec® for more information on MCI® Creteskin® or any of our other corrosion combating technologies.
