Cortec's EcoAir® VpCI®-377: Hi-Tech Rust Protection

EcoAir® VpCI®-377 provides better rust protection with the same handy convenience of a spray can application without the drawbacks of hazardous aerosols. Cortec's patented VpCI® technology delivers corrosion protection for hard-to-reach areas such as cavities and voids. Rather than a messy, oily residue, it dries to a thin, clear, film which requires no removal, clean up, or hazardous disposal. By providing short and long term protection for both ferrous and non-ferrous metals, the product allows users to work with one rust preventative coating for all their protection needs.

Cortec's EcoAir® Technology replaces flammable aerosols and removes potential fire hazard with a water-based, biodegradable formulation that acts like a fire extinguisher in the presence of a flame. The secret comes from its unique delivery system. Using a special EcoPouch, the spray is powered by compressed air. It allows the new, hi-tech formulas of today to solve old rust problems while taking care of safety, health, and environmental concerns.

Please contact Cortec® for more information on VpCI®-377 or any of our other corrosion combating technologies.
